

# COILING PERFORATED SERVICE DOORS

## PERFORATED SERVICE DOORS PF3000 SERIES

**PRODUCT DESCRIPTION:** PF3000 Series overhead coiling perforated service doors are typically used in areas where security with some visibility is desired. These units are designed with curtains constructed of solid slats that are perforated with round holes ranging from the standard 1/8" diameter holes set on 3/16" staggered centers to as large as 1-1/2" diameter holes evenly spaced throughout the entire curtain assembly. All PF3000 Series perforated doors are available in either McKeon's standard gray color in a baked enamel finish, with a powder coated finish in a variety of colors, in anodized aluminum in a variety of colors or in stainless steel with a number 4 polished finish.

### PRODUCT HIGHLIGHTS:

- Can be designed with a variety of perforation sizes, layout and curtain design.
- Custom designed to almost any height and up to 80 feet in width.
- Available with 16, 18, 20 or 22 gauge curtains.
- Designed for applications up to 250,000 cycles.
- Can incorporate integral pass thru swinging doors to allow for quick and easy access without opening the entire coiling door.
- Can be designed to sustain heavy wind load requirements.
