

# firemaster<sup>®</sup>

up to 4 hour fire rated curtain

revision 4.0 june 2019

delivering engineered solutions

The FireMaster® fire curtain is an uninsulated active fire curtain barrier that vertically protects openings in fire rated walls or can be used to completely replace non-load bearing fire rated walls. To protect means of escape or where there are combustibles in close proximity see [FireMaster® Plus](#). For smoke tight performance see [FireMaster® S](#).

FireMaster® Fire Curtains are designed as barriers to prevent the spread of fire in accordance with AS1530.7. Our FirMaster® Fire Curtain was developed with design in mind, ensuring you are able to achieve your design goals without any restrictions.

product	fire rating	min width	min height	max width	max height
firemaster 240	- / 240 / -	900 mm	N/A	30 metres	6 metres
firemaster 120	- / 120 / -	900 mm	N/A	30 metres	9 metres

fire rating

Full scale and full assembly fire testing to AS1530.7 providing fire integrity up to 4 hours. Testing also includes motor testing and proving 12 operating cycles across 30 minutes fire exposure.

No need to fire protect the headbox or side guides as the complete product is fire rated. Assessment report EXOVA EWFA-RIR-21553.

Incident Irradiance (kW/m²)		
Time (min)	I <sub>o</sub> - 0mm	I <sub>1000</sub> - 1000mm
0	0.00	0.00
15	16.32	12.00
30	23.12	17.00
60	32.64	24.00
120	48.97	36.00

installation

This system is 100% installed by our expert technicians, ensuring that the system provides the best protection. We also provide service technicians to ensure the system is well maintained.

side guides

Side guide channels seal the curtain fabric and the building. As fire can cause extreme positive or negative pressures, our unique fabric locking system has been developed and proven over many years to prevent fire spread and smoke leakage. Side guides can also incorporate smkoe seals to improve smoke containment

test/reset.

Test is performed by a simple key switch operator. The system is reset manually by pressing the reset button on the control panel. Automatic reset is available.

operation

FireMaster® will remain retracted within its head box until it is automatically activated by the fire alarm signal. Once activated it will completely close the opening, creating a fire and smoke compartment. Deployment is by gravity at a controlled speed of 0.06 - 0.15m/s. The only true gravity failsafe product on the market.

material finish

Metalwork is zinc coated mild steel. This can be painted on site or powder coated to DULUX or RAL colours.

benefits

- Small lightweight headboxing
- Can fire protect very large open spaces without the need to heavy structural supports
- Can easily retrofit into heritage buildings
- Can replace non-load bearing walls
- Patented TOTAL fail-safe by gravity which means it will work when there is no power.
- Low energy usage reducing emissions and costs
- Tested to be used on various flooring materials
- Made with sustainable materials

sustainability

We ensure that the construction, operation, and management of our systems are conducted utilising sustainable practices. The FireMaster® Fire Curtain is a safety system that is gravity failsafe, requiring little energy to operate. This system utilises sustainable materials which are recyclable and does not use any plastics. Our firemaster systems are constructed using sustainable practices which minimise emissions, reduce waste and eliminate water wastage and pollution.

controls

power supply  
230V AC 50Hz dedicated supply via all pole isolator

batteries  
2 x 12V 12A/h lead acid batteries

alarm signal  
Normally closed volt-free contacts. Open on activation

test facility  
Zone Control Panel (ZCP) located on front of Power Supply Unit (PSU)

display  
Power ON, Alarm ACTIVE and Alarm OFF status LED's on ZCP
